

PROFESSIONAL SERIES PUMP

- **Low 1750 RPM**
- **Preset 1000psi/70bar**
- **Easy access pressure adjustment**
- **Glycerin filled pressure gauge**
- **Heavy duty triplex ceramic plunger pump**
- **Solenoid valve to control inlet water supply**
- **Adjustable pressure regulator with bypass**
- **6 foot power cord**
- **On/off switch**
- **One year warranty**
- **Low Pressure Safety Switch**

The Fogco Professional Series pump range is our direct drive pump product and is designed for 115V and 230V 60 Hz. The Fogco Professional Series pump provides both quality and value. This range is our most economical solution to many fog system applications. This range includes an inlet solenoid valve, a low water safety switch, a glycerin filled pressure gauge, a thermal relief valve, and an adjustable pressure regulator with bypass. The safety switch ensures the safe operation of the pump and eliminates premature seal failure by preventing the pump from running without sufficient water supply.

The Professional range pumps are heavy duty outdoor rated units designed for 8hours operation per day, seven days a week under normal operating conditions. This range is ideal for both residential and commercial applications where price and value are the primary considerations. The range is designed for single zone applications. All professional Series pumps carry a 1 year warranty. Consult our Customer Service Department for details and assistance.
